RATCHET

Team tokens that only sell into strength.

A Meteora launchpad where the team allocation is held by a program, and can only reach the market above the graduation price.

useratchet.xyz · Meteora DBC track

THE PROBLEM

Vesting doesn’t stop a team dump. It puts it on a timer.

We read every team allocation ever locked on Meteora’s bonding curve, straight from mainnet.

1,477
team allocations on Meteora DBC

762/818
teams that claimed moved 90%+ out of the wallet

98%
of all claimed team tokens have left the team wallet

29/40
traced by hand sold on a DEX; 17 into the DAMM v2 pool

WE SAW IT ON OUR OWN LAUNCH

A fee can make a dump expensive. It can’t stop one.

19:23:00 UTC	We launched CHRL on mainnet, on our micro-raise preset.
19:23:15 UTC	A bot bought 15 seconds in and paid 37% in anti-sniper fees.
19:28:11 UTC	Graduated into a Meteora DAMM v2 pool, LP locked forever.
19:28:18 UTC	**Seven seconds later the bot sold into that pool, at a profit.**

Only a program that holds the tokens can refuse a sale.

HOW RATCHET WORKS

The team’s tokens never touch the team’s wallet.

01

Launch

Meteora DBC bonding curve. In the same transaction, the pool’s creator role moves to the vault.

02

Graduate

Into a Meteora DAMM v2 pool, with 100% of the LP locked forever.

03

Vest

The team allocation vests through Meteora Lock, and claims can only land in the vault.

04

Sell into strength

Unlocks leave only as Meteora DLMM limit orders at ≥1.25× the graduation price.

THE VAULT

Everything except selling into strength is refused on-chain.

A native Solana program. The floor starts at 1.25× the graduation price and can only go up. A sunset, if any, is fixed at launch and at least 180 days out.

`25/25 lifecycle checks on devnet · 30 unit tests + CI`

✕ Sell below 1.25× graduation	`BelowFloor`
✕ Lower the floor	`FloorCannotDecrease`
✕ Sell over 10% in a day	`DailyCapExceeded`
✕ Send tokens to the team wallet	`impossible before sunset`
✓ Ask at ≥1.25×, within the cap	`order placed`

BUILT ON METEORA, END TO END

Four Meteora programs, called directly.

Dynamic Bonding Curve

Four launch presets, creator role handed to the vault at launch, xStocks quotes via token badges.

DAMM v2

Every graduation lands in a DAMM v2 pool with 100% of the LP permanently locked.

Meteora Lock

Team vesting escrows whose claims can only land in the vault.

DLMM

The only exit for team tokens: limit-order asks the vault places, at or above the floor.

LIVE TODAY

Not a mockup. Try every piece of it.

Launchpad on mainnet

CHRL went from curve to a locked DAMM v2 pool in 5 minutes.

Equity raises

Curves priced in tokenized TSLA, NVDA, AAPL and GOOGL (xStocks).

Vault on devnet

Launch a vaulted token at /try and try to dump it yourself.

Unlock radar

Every upcoming DBC team unlock, and what that team did last time.

Launch check + badge

Grade any DBC token. Embeddable SVG badge, public API.

For agents

MCP server and Agent Skill; a keeper cranks the vault every 30 min.

WHY IT MATTERS

Holders get a floor the team can’t break. Teams get a way to prove it.

Holders

Team supply can only enter the market as resting asks above graduation. No surprise dump into your pool.

Teams

A verifiable commitment, shown by the launch check and badge, instead of a promise in a Telegram chat.

Launchpads

One instruction, adopt_launch, in the launch transaction. Works with any DBC config.

WHAT'S NEXT

From devnet to every Meteora launch.

01	**Audit**	Get the vault program audited, then deploy it to mainnet.
02	**Vault by default**	Every Ratchet launch adopts a vault in its launch transaction.
03	**Launchpad integrations**	Offer adopt_launch to other DBC launchpads, with the MCP server and API.
04	**Unlock alerts**	Push the radar to holders before an unlock lands.

Make your team sell into strength.
